EDUCATION

BBDNIIT, Lucknow, India

Expected 2027

Bachelor of Technology (B.Tech), Computer Science & Engineering

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), HTML5, CSS3, SQL

Frontend: React.js, Next.js, EJS (ejs-mate), Material UI (MUI), Bootstrap 5, Vite, CSS3 (Flexbox/Grid), Font Awesome

Backend: Node.js, Express.js, REST API design, MVC architecture

Databases: MongoDB (Mongoose ODM), MySQL

Authentication & Security: Passport.js, passport-local-mongoose, express-session, connect-mongo, Joi validation

Cloud & Media: Cloudinary (image storage), Multer, Mapbox GL JS (geocoding & maps)

Developer Tools: Git, GitHub, VS Code, Vercel, Postman, MongoDB Atlas

PROJECTS

Wanderly — Full-Stack Rental Listing Platform

2025

[Node.js](#), [Express](#), [MongoDB](#), [EJS](#), [Bootstrap 5](#), [Passport.js](#), [Cloudinary](#), [Mapbox GL JS](#)

- Built a full-stack, Airbnb-style property rental platform following the MVC architecture, with complete CRUD functionality for listings, reviews, and user accounts.
- Implemented secure user authentication and session management using Passport.js, passport-local-mongoose, and express-session with MongoDB-backed session persistence.
- Integrated Cloudinary and Multer for cloud-based image uploads, and Mapbox GL JS for automatic geocoding and interactive map display on listing pages.
- Designed a custom "Ocean Slate" design system using CSS variables for a consistent, easily maintainable color palette across the application.
- Enforced server-side data validation with Joi and built custom error-handling middleware and utilities (ExpressError, wrapAsync) to manage asynchronous errors gracefully.
- Developed a fully responsive UI, including a custom hamburger navigation menu, star-rating reviews (Starability), and sticky footer layout across devices.

Weather App — Real-Time Weather Dashboard

2024

[React.js](#) ([Vite](#)), [Material UI](#) ([MUI](#)), [JavaScript](#) ([ES6+](#)), [REST API](#)

- Engineered a responsive weather application that fetches and displays real-time temperature, humidity, and wind conditions for any searched city via REST API integration.
- Built the UI entirely with Material UI components — cards, text fields, and responsive grid layouts — for a polished, consistent design system.
- Implemented dynamic conditional rendering so the interface adapts smoothly to the searched city's current climate data.
- Structured the app around modular components (SearchBox, InfoBox, WeatherApp) for clean state management and easy scalability.
- Optimized the build pipeline with Vite for fast local development and hyper-fast production rendering.

CERTIFICATIONS

Data Structures and Algorithms (DSA) in C++ — Apna College Credential ID: 69df72c405a0a00d800fc208

Delta — Full Stack Web Development — Apna College Credential ID: 6a591e5a615d7cad7508c01a
